To Whom It May Concern:

I am writing to inform you of my professional recommendation of Mr. Dwight Sturtevant. It has been my pleasure of working with Dwight during my service as Director of Operations for the Alkarma Television Network, a.k.a. Media Dream.

During the past two plus years Dwight was a key operative in laying out the technical design of our 21,000 square foot office/warehouse building and transforming it into a broadcast facility consisting of two studios, production control rooms, master control, editing suites, and ancillary supporting infrastructure. He provided us with all the CAD drawings laying out the locations and destinations for all conduit and cabling pathways. This included rack layouts and tentative equipment placement. He also assisted in computing the electrical and HVAC loads required for each of the technical areas. One of the things I most appreciated regarding Dwight's involvement was his perspective not only from an engineering design, but also in regards to the needs of a real production/operation facility.

During this time I also free-lanced Dwight to work with us on numerous remote on-location productions as the EIC with our remote truck. On occasion when technical problems presented themselves, I also found Dwight to be relentless to either solve the issue or find a work around solution if at all possible. He is a very talented engineer and I am certain would prove to be an asset to any broadcast operation.

Sincerely,

Lee D. Nagelhout
President
Nagel Design, Inc.
